RAPID DISASTER SITUATION REPORT (SITREP)

Educational Prototype

Event Date: **2024-01-15** | Satellite: **—** | AOI: **[92.85, 26.55, 93.10, 26.75]**

0.05 km²	0	0	0
OBSERVED FLOOD WATER	FLOODED BUILDINGS	FLOODED BRIDGES	CUT-OFF SETTLEMENTS

1. WHERE DID THE FLOOD HIT?

Satellite analysis identifies **0.05 km²** of directly observed hazard extent and **0.0 km²** inferred along tributaries. Affected stretch extends along **Kameng River** from near **Silghat** to near **Kuwarital** (Sensors: Pre 2024-01-01 to 2024-01-13 / Post —).

2. WHAT WAS DAMAGED?

Asset	Flooded	Possibly Flooded	Cloud-Unv.	Total
Buildings	**0**	0	0	619
Bridges	**0**	0	0	22
Roads (km)	**0.0**	0.0	0.0	372.49

- Major road damage: **no major classified road destroyed** (Total 0.0 km flooded, 0.0 km possibly damaged, 0.0 km unverified under clouds).
- Major corridor bridges flooded: none on primary roads.

3. WHO IS CUT OFF?

0 settlements cut off from any town or hospital by road (pessimistic: **0**). **0 settlements** have no ground access (dual vehicle & walking severed).

No Ground Access (Air / Boat Priority)

Settlement	Lat, Lon	Bld
None (all retain access)		

5 Largest Road Cut-Off Settlements

Settlement	Lat, Lon	Bld
None (all retain access)		

4. WHAT TO REPAIR FIRST

- No single repair reconnects a settlement on its own.
- **No actionable repair package required (no network access restoration needed).**

Known Data Limitations:
- 0 buildings and 0.0 km roads remain unverified under cloud cover.
- Drainage hazard hydraulically inferred; radar shadow/layover masked with DEM look-angle.
- Asset baseline derived from pre-event OpenStreetMap; census population not included.
