RAPID DISASTER SITUATION REPORT (SITREP)

Educational Prototype

Event Date: **2023-04-15** | Satellite: **2023-04-19 to 2023-04-24** | AOI: **[88.58, 27.53, 88.72, 27.67]**

0.02 km²	0	0	0
OBSERVED HAZARD	DESTROYED BUILDINGS	DESTROYED BRIDGES	CUT-OFF SETTLEMENTS

1. WHERE DID THE FLOOD HIT?

Satellite change detection & damage extent

Satellite analysis identifies **0.02 km²** of directly observed hazard extent and **0.02 km²** inferred along tributaries. Affected stretch extends along **Teesta** from near **Nanga** to near **Nanga** (Sensors: Pre 2023-04-09 to 2023-04-14 / Post 2023-04-19 to 2023-04-24).

3. WHO IS CUT OFF?

0 settlements cut off from any town or hospital by road (pessimistic: **0**). **0 settlements** have no ground access (dual vehicle & walking severed).

No-Ground-Access Settlements (Air / Boat Priority)

Settlement	Lat, Lon	Bld
None (all retain access)		

5 Largest Road Cut-Off Settlements

Settlement	Lat, Lon	Bld
None (all retain access)		

2. WHAT WAS DAMAGED?

Asset	Destroyed	Damaged	Cloud-Unv.	Total
Buildings	**0**	0	0	826
Bridges	**0**	0	0	13
Roads (km)	**0.0**	0.0	0.0	75.79

- Major road damage: **no major classified road destroyed** (Total 0.0 km destroyed, 0.0 km possibly damaged, 0.0 km unverified under clouds).
- Major corridor bridges destroyed: none on primary roads.

4. WHAT TO REPAIR FIRST

- No single repair reconnects a settlement on its own.
- **No actionable repair package required (no network access restoration needed).**

Known Data Limitations:

- 0 buildings and 0.0 km roads remain unverified under cloud cover.
- Drainage hazard hydraulically inferred; radar shadow/layover masked with DEM look-angle.
- Asset baseline derived from pre-event OpenStreetMap; census population not included.
