RAPID DISASTER SITUATION REPORT (SITREP)

Educational Prototype

Event Date: **2021-02-07** | Satellite: **2021-02-10 to 2021-02-15** | AOI: **[79.60, 30.42, 79.80, 30.56]**

0.27 km²	0	1	0
OBSERVED HAZARD	DESTROYED BUILDINGS	DESTROYED BRIDGES	CUT-OFF SETTLEMENTS

1. WHERE DID THE FLOOD HIT?

Satellite change detection & damage extent

Satellite analysis identifies **0.27 km²** of directly observed hazard extent and **0.17 km²** inferred along tributaries. Affected stretch extends along **Ronti Gad** from near **Panwarsa** to near **Paing** (Sensors: Pre 2021-01-31 to 2021-02-05 / Post 2021-02-10 to 2021-02-15).

3. WHO IS CUT OFF?

0 settlements cut off from any town or hospital by road (pessimistic: **0**). **0 settlements** have no ground access (dual vehicle & walking severed).

No-Ground-Access Settlements (Air / Boat Priority)

Settlement	Lat, Lon	Bld
None (all retain access)		

5 Largest Road Cut-Off Settlements

Settlement	Lat, Lon	Bld
None (all retain access)		

2. WHAT WAS DAMAGED?

Asset	Destroyed	Damaged	Cloud-Unv.	Total
Buildings	**0**	0	10	94
Bridges	**1**	0	2	6
Roads (km)	**0.37**	0.14	8.22	34.56

- Major road damage: **track: 0.37 km** (Total 0.37 km destroyed, 0.14 km possibly damaged, 8.22 km unverified under clouds).
- Major corridor bridges destroyed: none on primary roads.

4. WHAT TO REPAIR FIRST

- No single repair reconnects a settlement on its own.
- **No actionable repair package required (no network access restoration needed).**

Known Data Limitations:

- 10 buildings and 8.22 km roads remain unverified under cloud cover.
- Drainage hazard hydraulically inferred; radar shadow/layover masked with DEM look-angle.
- Asset baseline derived from pre-event OpenStreetMap; census population not included.
